ACKNOWLEDGMENTS

I want to thank Allah God of Moses, Jesus and Muhammad for his helping me to write this Book.

1 .SCIENTIFIC MIRACLES IN ASTRONOMY & ASTROPHYSICS

The First sky(Heaven):

Chapter or Surat 37Assafat(The Aligners)
verses 6 to 10 :

**6. We have adorned the lower heaven with
the beauty of the planets.**

7. And guarded it against every defiant devil.

8. They cannot eavesdrop on the Supernal Elite, for they get bombarded from every side.

9. Repelled—they will have a lingering torment.

10. Except for him who snatches a fragment—he gets pursued by a piercing projectile.

As known that there's seven heavens mentioned in Tawrat, Evangile and Quran .

In this verse Allah describe the existence of first heaven or lower heaven as the heaven which contains the planets of our solar system.

There's any other explanation for this verse like that those planets are planets for other heavens in other universe .The Quran come to the humans and Jinns on earth and the heavens are the known ones.

So our solar system exist in the lower or first heaven from seven.

The seven skies(Heavens) are a Built:

Surat 50 Qaf verse 6:

6. Have they not observed the sky above them, how We constructed it, and decorated it, and it has no cracks?

The sky is decorated with planets, galaxies, nebulas, stars, etc and there's no cracks which means no pores that you can detects with naked eye or via telescopes.

Chapter or Surat 2 AlBaqarah(The Cow)
verse 22 :

22. He who made the earth a habitat for you, and the sky a structure, and sends water down from the sky, and brings out fruits thereby, as a sustenance for you. Therefore, do not assign rivals to Allah while you know.

Surat 40 Ghafer(Forgiver) verse 64:

64. It is Allah who made the earth a habitat for you, and the sky a structure. And He designed you, and designed you well; and He provided you with the good things. Such is Allah, your Lord; so Blessed is Allah, Lord of the Worlds.

Surat 78 Annaba (The event) verse 12 :

12. And built above you seven strong ones?

Surat An-Nazi'at (The Snatchers) verse 27 :

27. Are you more difficult to create, or the heaven? He constructed it.

Surat 91 Ashams(The sun) verse 5 :

5. And the sky and He who built it.

In all those verses there's some vocabularies which they repeated like : structure, constructed, construction, built, etc.

Those words come from a one single word in Arabic language which is : Binaa.

Unfortunately, the translation to English can't give the real meaning of the word in Arabic.

The most common word I English between all these words is : Building.

So through the Quran, the sky is built by Allah or God, God of Moses, Jesus and Muhammad peace be upon them all .But how could be a building and the sky or heavens are unlimited?

When Astronomer began to discovering the universe they named it space because they thought that it's full of "vacuum", but after the development of Astronomy and astrophysics, they saw a cosmic network building and they began to name it : cosmic web.

It's confirmed that the distances between galaxies are not empty in contrary they are full of different gas masses like the nebulas

and multiple composition spreads of gases mostly in hydrogen beside the cosmic dust which contains atoms of calcium, sodium, potassium, titanium, iron, etc beside also water globules, Ammonia, Formaldehyde and many other chemical composition.

Between the galaxies exists the universal gravitation or intergalactic gravitation, between the stars exists the inter-stars gravitation and between the planets it's exists the interplanetary gravitation that we can find easily with the influence of the moon on earth .

Also it's exist the influence of gravitation between stars and planets like our beautiful sun and our great house the earth.

The different types of gravitation and chemical compositions are a kind of invisible networking mesh built between all the cosmic bodies to make them related .

The scientists begin to see a perfect engineered building, the galaxies and their groups considered as cosmic bridges and walls and the dark matter is their manipulator.

Some scientists like Paul Miller prefers the term : Blocks instead of galaxies, he declared:

The first galaxies or rather the first galaxy building blocks will form inside the threads of the web. When they start emitting light

they will be seen to mark out the otherwise invisible thread much like beads on a string.

Other great scientists declares also the same statement that the universe is a building covered by beautiful pearls :

Scientists say that matter in the Universe forms a cosmic web in which galaxies are formed along filaments of ordinary matter and dark matter like pearls on a string.

This description provided by Astrophysicians confirms completely the different verses above whose talking about the beautiful engineering of a universe built like a strong texture composed from the visible and invisible meshes.

In the twenty first century the scientist did a simulation of the universe with a super computer including all the new discovered information and the super computer gave a reality of the construction of Universe as a complete Building.

The Quran give besides the verses above another verse who describe perfectly this new universe discovering in :

Surat 51Adh-dharyat(The Spreaders) verse 7:

7. By the sky that is woven.

The sky mentioned in this verse means the internal atmosphere of the earth and it's outside the universe.

Woven a past participle coming from weave to form or construct something by interlacing materials or combining elements.

The woven also can be considered as a roads in the galaxies and in the known universe .As known today, the planets have their orbits and the natural and artificial satellites has theirs orbits.

The woven also means the cylindrical roads discovered by the scientist Albert Einstein to travel in the universe with speed of light.

So the woven is mentioned in Quran for more than fourteen hundreds years and the humanity begin to discover this truth in the beginning of the twenty first century.

The Expansion of the Universe :

Surat Adh-dharyat(The spreaders) verse 47 :

47. We constructed the universe with power, and We are expanding it.

Until the second decade of the twenty century, scientists still believing in static form, it's means the stars, nebulae and galaxies still in their places without movement. In the nineteenth century, Christian Doppler the Austrian scientist discovered his theory of : Doppler Effect, which is based on the growing of sound when a source like a train become more near to the receiver and then the sound become less and less when the train moves away with the time.

The same theory applied by Doppler on the light sources: when the source of light become more and more near to the receiver the light become blue and when the source moves away the color become yellow then red .

That's why when you see a blue star in the night sky that's means this star is in the young age because its near to earth and distance between it and earth is short so its age is this distance .When the color become yellow that's means the distance is more and its age is older and when the color become red, that's means the distance is far away and the age of the star is more older and may dying at any time then the great explosion occurs and a new cycle of formation of new star begin.

The scientists Slipher, Edwin Hubble and his assistant Milton and Albert Einstein confirmed the expansion of galaxies in the universe and as a consequence the expansion of universe.

The expansion of universe becomes a reality in the scientific communities and it's become a known thing not a strange one.

The word expansion in Arabic has not the same meaning as English, unfortunately, it's mentioned as present participle which is available for all the times : past, present and future.

The universe expanded he still in expansion and it will be in expansion.

All this mentioned in the verse above for more than fourteen centuries, the humanity believe on it in the second half of the twenty century .This is the miraculous effect of the Quran.

What do you think ? This Quran is great or not and what's about his creator and sender Allah Do you believe in his existence and unicity?

Eleven Planets in the Solar System not Nine:

Surat or Chapter 12 Yusuf(Joseph) verse 4:

4. When Joseph said to his father, “O my father, I saw eleven planets, and the sun, and the moon; I saw them bowing down to me.”

Here prophet Yusuf or Joseph peace be upon him said to his father Yaacoub or Jacob peace be upon him that he saw eleven planets and sun and moon bowing down or do Sujud

which is a step in the daily five prayer of Muslims .

The explanation coming later after he become a minister in Egypt when his eleven brothers, his mother and his father did this action.

But, those eleven months are also the eleven months of the solar system .As the astronomy said today there's nine planets in the solar system with exception of planet Pluto which is considered as a gas form and not yet a planet, there's of course discussion and contradictions between scientists.

The two undiscovered planets, unfortunately, up today by the technology of Hubble telescope and other earthian's telescopes will be discovered in the future and Neptune

planet will not be yet the last one in the solar system.

Sirius Star:

Surat 53 Annajm(The Star) verse 49:

49. And that it is He who is the Lord of Sirius.

Sirius known as Sirius A because it's from the Dog Star Constellation, it is the brightest star that we can see with naked eye from earth. The name Sirius means "glowing" in Greek .Its visual magnitude is minus 1.44, the star is outshone only by several planets as well as the International Space Station.

Because Sirius is so bright, the astronomers were very interested about it until they

discovered its small brother or companion Sirius B in 1862.

The mass of Sirius B is 10,000 times less than Sirius A. Astronomers discovered that it's a dead star that's why they named it : White dwarf.

The distance between Sirius A to earth is 8.6 light years.

It's easy to find Sirius, you can watch the constellation of Orion and especially the Belt or the three aligned stars as a pointer or reference and from the star Alnitak, approximately 30° to the left down.

The mentioning of the Sirius from fourteen centuries in the Quran and its discovery just in the ninetieth century which means a gap of

twelve centuries is a prove of the scientific miracle of Quran and his noble position.

The Universe is created from water :

Surat Al-Anbiya (The Prophets) verse 30 :

30. Do the disbelievers not see that the heavens and the earth were one mass, and We tore them apart? And We made from water every living thing. Will they not believe?

Surat 24 Annur(The light) verse 45 :

45. Allah created every living creature(Dabbah) from water. Some of them crawl on their bellies, and some walk on two feet, and others walk on four. Allah

creates whatever He wills. Allah is Capable of everything.

In the verses above, Allah say that he made all the living things from water and also the dabbah which are the different races of animals .

Proved by science today, If we observe those words, we found that all the beings have the water as a composition of their bodies from the human race to the animals to the vegetations, to the planets, to the stars, the galaxies, the nebulas You can say that the stars can't have water like our sun, I answer you that the composition of water is two atoms of hydrogen and one atom of water , the hydrogen exists in the sun, in the nebulas,

in comets, in galaxies and planets also it can be extracted from the snow in several planets.

For searching the life in the known universe, scientists search for proofs of existing of water in any angle of it.

On earth, there's not a being can live without water so the vital and main composition of any being is the water .

The percentage of this composition differs from a race to other exceptions for the Jinns which are created from fire and Almalaika or the Angels who are created from pure light or Noor and they don't have any biologic system, so they don't eat or drink or sleep or even has a gender.

The Sun, the Moon, the Night and the Day:

Surat 36 Yaseen verse 38 :

38. And the sun runs towards its destination. Such is the design of the Almighty, the All-Knowing.

In the verse 38, Allah say that the sun runs to a prefixed destination .As the science say, the solar system lead by the sun is located in the tail of the milky way and turns around his center every two hundred fifty millions years So the sun is running she is not fixed in the same place.

Mentioning the run itself is a scientific miracle of Quran .The destination is unknown because as we know, our galaxy itself run in the universe and she goes to a

collision or supernova with his sister the Andromeda galaxy .So the final destination is just known by Allah.

Surat 13Arraad(The Thunder) verse 2:

2. Allah is He who raised the heavens without pillars that you can see, and then settled on the Throne. And He regulated the sun and the moon, each running for a specified period. He manages all affairs, and He explains the signs, that you may be certain of the meeting with your Lord.

Surat 35 Fatir(Originator) verse 13

13. He merges the night into the day, and He merges the day into the night; and He regulates the sun and the moon, each running for a stated term. Such is Allah, your Lord; His is the sovereignty. As for those you call upon besides Him, they do not possess a speck.

Surat 39 Azumar(Throngs) verse 5 :

5. He created the heavens and the earth with reason. He wraps the night around the day, and He wraps the day around the night. And He regulates the sun and the moon, each running along a specific course. He is indeed the Almighty, the Forgiver.

From those all verses, we can conclude that the moon and the sun are dependant one to each other .

Allah mentions through those verses that the night is related with the moon and the day or journey is related with the sun and both are in a regulated unbreakable system that it has never stopped or will never be stopped until Allah want it.

The miraculous side consists in the entering of night in the day and the entering of the day in the night .

As we know all and as the science gave, the earth turn around itself and the sun and the moon turn around the earth with one side, we can see this miracle at anytime for example when the morning enter in Sydney Australia,

the night persists in New York United States and the dawn in France, so this is the merge and wraps of the day in the night and the night in the day.

The sun and the moon runs for a specific period, specific course and a stated term .

All those terms give credibility about the science evidences of the astronomy which informs that the sun will be aged and its color will turn to the red, in parallel his size will be bigger and bigger and it will eat the planets the nearest to it including their moons like the earth.

The Stars are a guides for people:

Surat or chapter 16 Annahl(The Bee) verse 16 :

16. And landmarks. And by the stars they guide themselves.

In this verse Allah say that he gave and give to people beside the infinites gifts that he already did, he give to them when they travel in the land or in the sea landmarks in the journey time and stars in the night.

The stars or the constellation of stars known like the polar star, the greatest bear constellation, the youngest bear constellation, Orion constellation, etc are representing guides through the year to travelers to know their position in land or sea and they can specify their future directions to North, South East or West.

This verse made the Muslims the leaders in the sea for long time and it's known that the

American was discovered for the first time by Ahmad Mohey Eddine Biri Arraiss and not by Christophe Columbus, even he made a perfect map from fifteenth century (he died in 1513) which coincide with twenty century higher technology and developed maps.

So the use of stars or their constellations is a miracle of several miracles in Quran.

The Pulsar Star :

The Pulsar is a neutron star that emits rapid and periodic pulses of radiation.

A neutron star is an extremely compact ball of neutrons created from the central core of a star that collapsed under gravity during a supernova explosion.

Neutron stars are extremely dense: they are only 10 kilometers or so in size, but have the mass of an average star (usually about 1.5 times more massive than our Sun). Regularly emits pulses of radiation through the rapid rotation around their own axis. There's more than 500 pulsars in the Milky way galaxy.

Surat 86 Attariq(Door Knocker) verses1 to 3:

In the name of Allah, the Gracious, the Merciful.

1. By the sky(heaven) and at-Tariq.

2. But what will let you know what at-Tariq is?

3. The Piercing Star.
